Project Overview & Requirements

Why?

During my experience assisting in photo printing business that my mother manages, I observed firsthand how disorganized workflows, manual order tracking, and scattered record-keeping created delays, and inaccurate daily sales endings. Traditional printing services often lack structured processes for managing multiple services such as printing, scanning, and lamination, which can compromise efficiency and accuracy.

The motivation to develop this system arose when our team's first project idea, a "Library Rental System," did not succeed. This challenge sparked the drive to create a solution that addresses real-world business problems, inspiring long hours of collaborative effort to produce a system that is both practical and reliable.

What?

"SHUTTER DIGITAL PHOTO PRINTING POS" is a Point-of-Sale (POS) system developed by Team F4 (Arish, Keth, Jaymar, and Kiarra). It is designed to automate the core operations of a printing business, including:

- Managing orders for printing, scanning, and lamination
- Calculating payments and generating receipts
- Recording and tracking transaction history (CSV)
- Managing cashier accounts and permissions

The system serves as a comprehensive solution that bridges gaps in workflow efficiency, reduces human error, and enhances both cashier productivity and administrative oversight.

How?

The system implements a modular, menu-driven interface that allows users to navigate services efficiently. Key components include:

- **Cashier Module:** Secure login, new order creation, cart management, checkout, and transaction logging

- **Administrator Module:** Cashier account management, transaction history review, and tarpaulin order claiming
- **Persistent Storage:** All transactions and cashier credentials are stored in structured text files for reliability and future scalability
- **User Interaction:** Console-based menus with clear prompts, input validation, and real-time feedback to minimize errors

By combining structured programming, modular design, and real-time feedback mechanisms, the system ensures operational efficiency while remaining accessible to users with minimal technical training.

Executive Summary

Shutter Digital Printing Services required a solution to automate its multi-service operations. The POS system developed by Team F4 provides a reliable, efficient, and user-friendly platform for cashiers to manage orders and transactions while allowing administrators to oversee staff and operational performance. This solution improves workflow organization, reduces errors, and enhances customer service quality.

Target Audience

- Small business printing service owners
- Cashiers handling day-to-day customer orders
- Administrative staff overseeing operations and staff

Functional Requirements

- Cashiers can log in/out, create orders, manage cart items, and process checkouts
- Administrators can manage cashier accounts, view transaction history, and claim tarpaulin orders
- Administrator/Cashier can easily get the total daily sales with the automatic CSV saving

Non-Functional Requirements

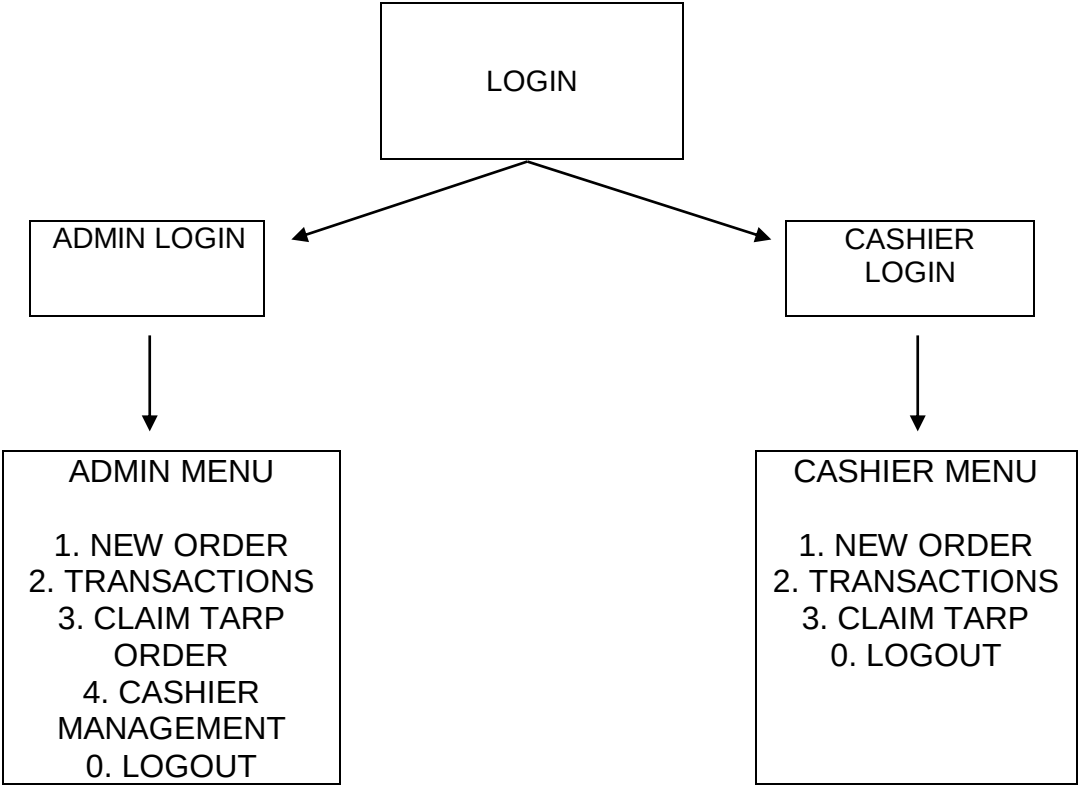

- **Usability:** Easy-to-navigate menus and prompts
- **Reliability:** Transactions and user data persist accurately in storage files
- **Performance:** Orders processed quickly without system lag
- **Security:** Password-protected accounts for cashiers and administrators

System Architecture & Design

Tech Stack

- Language: C (ANSI standard)
- File storage: Text files (.txt),
- Platform: Windows console

Architecture Diagram

Data Storage Design (File-Based Schema)

- **CashierLoginCredentials.txt** – Stores cashier usernames and passwords
- **AdminLoginCredentials.txt** – Stores administrator credentials
- **Transactions.csv** – Stores transaction records in structured, tabular format

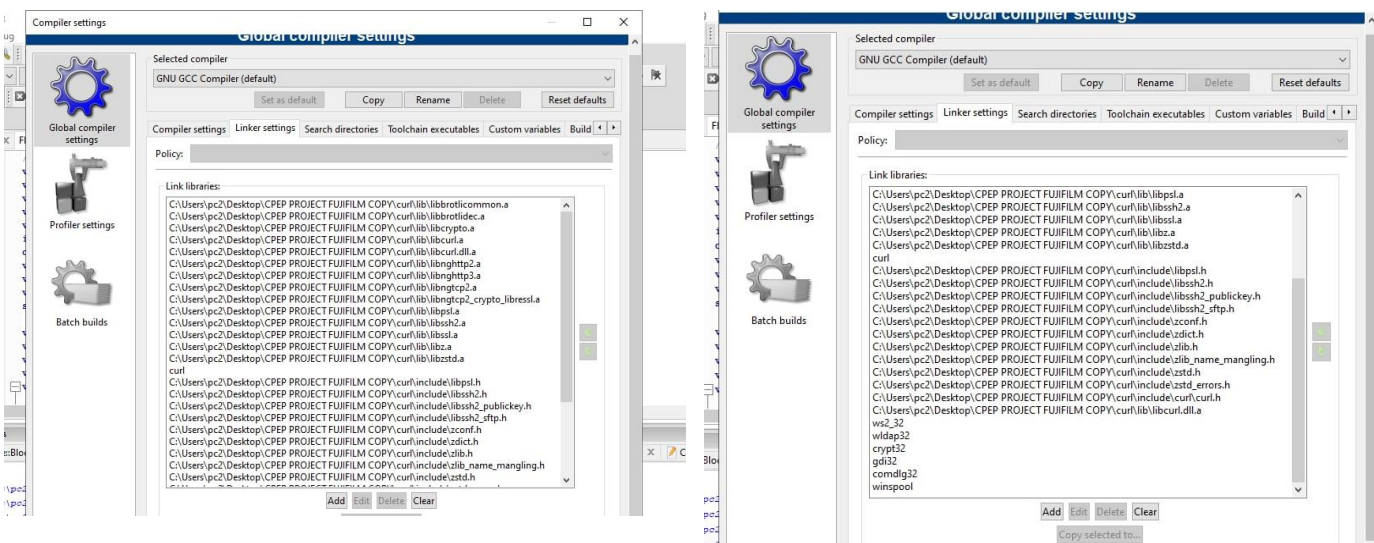

Installation & Setup Guide

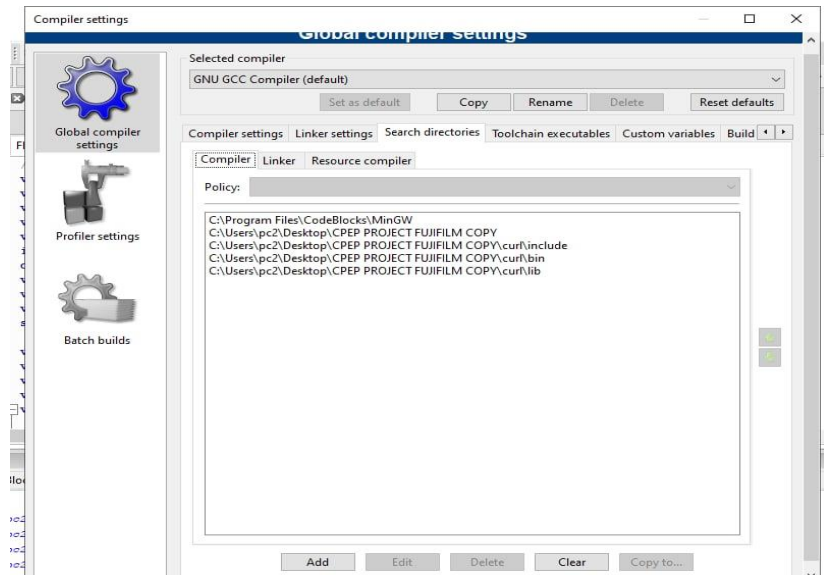

Prerequisites

- **Operating System:** Windows
- **Development Environment:** Code::Blocks IDE with MinGW compiler
- **Project Files:** POS system source files (.c), project file (.cbp), and required CSV/text files

Step-by-Step Installation Instructions

1. **Download Code::Blocks with MinGW Compiler**
Download and install Code::Blocks bundled with the MinGW compiler from the official SourceForge page:
<https://sourceforge.net/projects/codeblocks/files/Binaries/25.03/Windows/codeblocks-25.03mingw-setup.exe>
2. **Open the Project File**
Launch Code::Blocks and open the provided project file FINAL_PROJECT_FUJIFILM.c included in the system folder.
3. **Open the C Source File**
In the project workspace, locate and open the main C source file to ensure all program components are properly loaded.
4. **Configure Compiler Settings**
Navigate to **Settings** → **Compiler** and apply the required compiler configurations as shown in the provided documentation images BELOW. These customizations ensure correct compilation, file handling, and console execution.

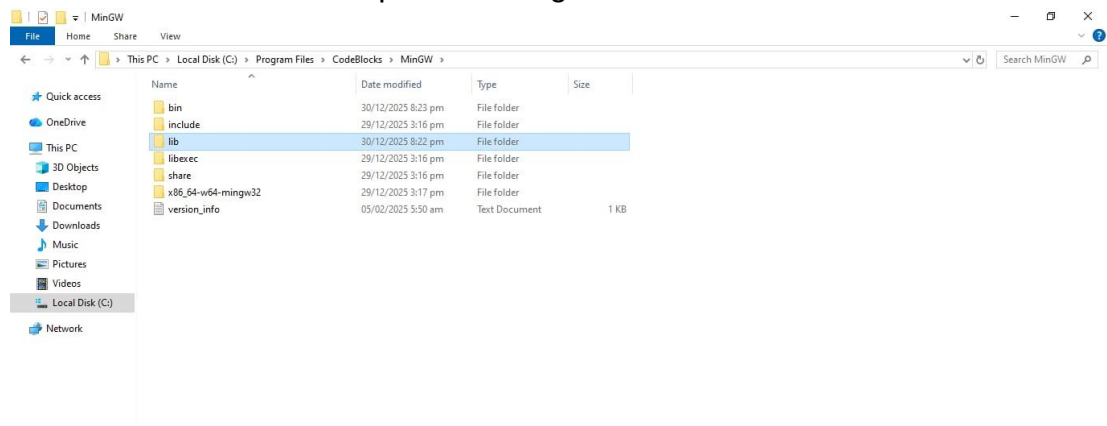

5. Build and Run the Program

Click **Build and Run** to compile and execute the system.

- If a build error occurs, copy the **bin** and **include** folder inside the **curl** folder in this path: C:\Program Files\CodeBlocks\MinGW

- If the error persists after applying the fix, contact **Arish Giel R. Catada** via Facebook for support.

6. Run the POS System

Once the program runs successfully, the POS system will launch in the console environment and is ready for use.

Environment Variables

- **None required.**
All configurations and system data are managed through local files.

User Manual & System Documentation

User Guide

The SHUTTER DIGITAL PHOTO PRINTING POS is a **menu-driven, role-based console system** designed to support daily printing service operations from order creation to transaction recording. All interactions are performed through numbered menus, allowing fast execution with minimal training.

Administrator Workflow (Complete Operational Flow)

1. Launch the application and log in using administrator credentials.
2. After successful authentication, the system displays the **Admin Menu**, which provides access to:
 - New Order
 - Transactions
 - Claim Tarpaulin Order
 - Cashier Management
 - Logout

New Order Process

1. Select **New Order** to begin a transaction.
2. Choose a service category:
 - Photo Printing
 - Tarpaulin Printing
 - Lamination
 - Scanning
3. Select specific services (e.g., photo sizes or custom tarpaulin dimensions).
4. Enter quantities when prompted.
5. Items are added to the cart and the cart total is updated in real time.
6. The administrator may:
 - View Cart to review items
 - Edit Cart to modify quantities or remove items
 - Continue adding services
7. Select **Checkout** to finalize the transaction.
8. The system collects customer details, processes payment, calculates change, and saves the transaction record.

Transaction Monitoring

- Select **Transactions** to view previously recorded orders, including tarpaulin status.
- Records are read from CSV and text files for verification and reference.

Tarpaulin Claiming

- Select **Claim Tarpaulin Order** to update pending tarpaulin orders to claimed status once completed.

Cashier Management

- Administrators can:
 - Add new cashier accounts
 - Remove existing cashier accounts
 - Change cashier passwords
- 3. Select **Logout** to end the administrator session securely.
- 4.

Cashier Workflow (Complete Operational Flow)

1. Launch the application and log in using cashier credentials.
2. Upon successful authentication, the **Cashier Menu** appears with access to:
 - New Order
 - Transactions
 - Claim Tarpaulin Order
 - Logout

New Order Process

1. Select **New Order** to start a customer transaction.
2. Choose a service type:
 - Photo Printing
 - Tarpaulin Printing
 - Lamination
 - Scanning
3. Select service details and enter quantities.
4. Added items appear in the cart with updated totals.

5. The cashier may:
 - View Cart to confirm order contents
 - Edit Cart to correct mistakes
 - Add additional services
6. Proceed to **Checkout** to finalize the order.
7. The system calculates the total amount, accepts payment input, computes change, and saves the transaction automatically.

Transaction Review

- Select **Transactions** to review previous transactions for verification purposes.

Tarpaulin Claiming

- Select **Claim Tarpaulin Order** to mark completed tarpaulin jobs as claimed.
3. Select **Logout** to safely exit the cashier session.

System Behavior Notes

- The system prevents invalid input through continuous validation prompts.
- Only administrators have access to cashier management features.
- All transactions are saved immediately after checkout to prevent data loss.

Testing & Quality Assurance

Testing Strategy

The SHUTTER DIGITAL PHOTO PRINTING POS was tested using **extensive manual execution**, simulating real operational use by both administrators and cashiers. Every menu, service option, and workflow was executed repeatedly to ensure predictable behavior, input safety, and data integrity.

Testing focused on the following key areas:

- Complete menu navigation for both Admin and Cashier roles
- Validation of all numeric and string inputs
- Cart operations including add, edit, remove, and checkout
- Login security and role-based access control
- Receipt generation and transaction persistence
- Graceful exit handling for all menus

All input collection is handled by **dedicated validation functions (voids)** that enforce required data types and valid ranges. This ensures that invalid data cannot propagate into the system.

Input Validation and Exit Handling

- Every menu in the system includes a **dedicated exit or back option**, allowing users to safely return to previous menus without terminating the program.
- All user inputs are processed through specialized input functions that:
 - Accept only valid numeric ranges
 - Reject negative values and zero quantities where not allowed
 - Prevent invalid menu selections
 - Re-prompt the user until correct input is provided

- This design prevents crashes, undefined behavior, and incorrect
- transaction records.

Receipt and Transaction Verification

- Receipts are generated correctly during checkout and display:
 - Store name and branding
 - Ordered services and quantities
 - Total amount, cash received, and change
- Receipt output formatting was tested across multiple transactions to ensure consistent alignment and readability.
- All completed transactions are:
 - Automatically saved to their assigned **CSV or text-based files**
 - Stored in the correct directory without overwriting existing records
 - Available for later review through the Transactions menu

No data loss or formatting errors were observed during repeated execution.

Test Cases Summary

Test Scenario	Input	Expected Result	Actual Result
Photo Printing Menu	Select option 3	Opens Other Sizes menu	Pass
Custom Tarpaulin Pricing	Width 5 ft × Height 4 ft	Correct price calculation (20 sq.ft × rate)	Pass
Cashier Login Validation	Incorrect password	Login denied	Pass

Test Scenario	Input	Expected Result	Actual Result
Quantity Validation	Quantity = 0	System prompts for re-entry	Pass
Menu Exit Handling	Select exit option	Returns safely to previous menu	Pass
Receipt Generation	Complete checkout	Receipt prints with store logo	Pass
Transaction Storage	Finalize order	Transaction saved to correct file	Pass
Previous Transactions	All tarp previous transactions	Organized list of tarp transactions	Failed

All test cases were executed multiple times with consistent results.

Quality Assurance Assessment

After extensive testing and repeated operational use, the system demonstrates **stable performance, accurate calculations, and reliable data storage**. The combination of structured input validation, controlled menu flow, and persistent transaction logging ensures that the system can be confidently used in a small business printing environment.

No critical runtime errors or data corruption issues were identified during testing.

Project Reflection

Challenges Overcome

- Clean and Precise Centered Output
- Downloading Receipt Printer Driver (took 2 days to find the exact driver)
- File I/O and transaction persistence
- POS receipt printing (took many hours to figure)
- Adding logo to the receipt.
- Stack of projects

Future Enhancements

- GUI interface
- Database integration (SQLite/MySQL)
- Organized transaction saving
- Some customer ask for the soft copy, We can build a website for easier and time efficient way, we just give them a special code to enter so they can access their photo, all photo transactions like RUSH and VISA should be automatically uploaded to the web, so we can have a secure and reliable cloud storage while costumers can also pre-order their.

Lessons Learned

- Don't do anything by yourself, ask help from groupmates
- Do the project as soon as possible
- Spend half of the time given by the instructor to finish the project at planning
- Communicate well with groupmates
- Take failures as stepping stone to the better path

Glossary of Terms

- **POS:** Point-of-Sale
- **Login:** An act of entering your name in order to be able to start using a computer system
- **Admin:** User with full system privileges
- **Cashier:** User managing orders and checkout
- **Menu:** List of options displayed
- **Rush Photo:** Refers to the process of quickly producing high-quality photographs
- **Visa Photo:** A type of photograph required in the visa application process
- **Tarpaulin Printing:** also known as large format printing, involves the creation of high-quality graphics on large, durable sheets of material, typically made from vinyl or PVC
- **Lamination:** Lamination refers to the process of bonding or coating a material with a protective layer, typically using heat, pressure, or adhesive
- **Scanning:** is the process of converting a physical (hardcopy) document into a digital file (softcopy) using a scanner or a scanning app
- **Cart:** Temporary storage before checkout
- **Checkout:** refers to the final step of completing a transaction or process.

User Interface / User Experience	Interface is highly efficient and effective for the purpose of the solution. All elements of interface are clear, complete, and suitable to the intended user. Color, placement, and font choices make for a consistent experience, and demonstrate strong understanding of design conventions	Interface is efficient and effective for the purpose of the solution. Most elements of the interface are clear and suitable to the intended user. Color, placement, and font choices make for a mostly consistent experience, and demonstrate moderate understanding of design conventions.	Interface is somewhat efficient and effective for the purpose of the solution. Elements of the interface are adequate in terms of clarity and suitability to the intended user. Color, placement, and font choices make the solution adequately useable, and demonstrate basic understanding of design conventions.	Interface is inefficient and/or ineffective for the purpose of the solution. Elements of the interface are unclear, incomplete and/or unsuitable to the intended user. Color, placement, and font choices do not demonstrate understanding of design conventions.
Teamwork	The team worked well together to achieve objectives. Each member contributed in a valuable way to the project. All data sources indicated a high level of mutual respect and collaboration. Willingly accepts and fulfills individual roles in group, sensitive to feelings and needs of group members	The team worked well together most of the time, with only a few occurrences of communication breakdown or failure to collaborate when necessary. Members were mostly respectful of each other. Fulfills individual roles within group with occasional prompting, mostly sensitive to feelings and needs of group members	The team worked together few times, and most of the time, fail to collaborate. Few members lack respect of others. Works toward group goals with occasional prompting, maintains positive attitude	The team did not collaborate or communicate well. Some members would work independently, without regard to objectives or priorities. A lack of respect and regard was frequently noted. Works toward group goals only when prompted, needs occasional reminders to be sensitive to others
Code Execution	Program is functional and refined, with extra features that exceed the requirements.	Program works in the way the student intended.	Program mostly works, and has only minor flaws.	Program does not work, or has major flaws that prevent its intended use.
Specifications	The program works and meets all the specifications.	The program works and produces the correct results and displays them correctly. It also meets most of the other specifications.	The program produces correct results but does not display them correctly.	The program is producing incorrect results.
Effectiveness	Excellent - Design is clear, easy to navigate, logical and provides an effective means to help user.	Design is clear, but assistance is needed to navigate some areas. Project is adequately of benefit.	Design lacks intuition and is difficult to navigate. Minimal effectiveness.	Design is confusing and is not navigable. Project does not provide any benefit.
Readability	The code is exceptionally well organized and very easy to follow.	The code is fairly easy to read.	The code is readable only by someone who knows what it is supposed to be doing.	The code is poorly organized and very difficult to read.
Reusability	The code could be reused as a whole or each routine could be reused.	Most of the code could be reused in other programs.	Some parts of the code could be reused in other programs.	The code is not organized for reusability.
Organization	Well organized and coherent, topics are in logical sequence, includes clear introduction and conclusions.	Organized, some topics are out of logical order, conclusions are generally clear.	Some organization, topics jump around, conclusions are unclear	Not organized, topics make no sense
Delivery/Oral Presentation	Student comes properly dressed for the presentation, speaks with confidence and clarity and loud enough to be heard. Poise and eye contact excellent. Relied very little on notes.	Student comes properly dressed for presentation, speaks with confidence and clarity loud enough to be heard. Poise and eye contact good. Delivery is good. Relied very little on notes.	Student comes properly dressed for the presentation, speaks loud enough to be heard but could have been more confident while presenting. Delivery needs polishing. Relied extensively on notes.	Student comes not properly dressed for the presentation and speaks with little confidence and in a soft voice. Reads from notes and rarely looks at judges
Discussion	Superior discussion from concept to implementation	Sufficient discussion of the concept to implementation with minimal errors.	Insufficient discussion of the concept to implementation with minimal errors.	Little or no discussion of the concept to implementation with some errors.
Ability to Answer Questions	All questions were answered correctly, confidently, and accurately, reflecting a firm grasp and deep understanding of the Project.	All questions were answered correctly and accurately.	One question was not answered correctly.	More than one question was not answered correctly.
